

WATER AND SEWAGE SYSTEM

- The key sector of water management and sewage system is located in the western part of the exhibition grounds and is therefore easily accessible from West, North and Northwest entrances. Specifically, the halls A1–A3, B1–B3, C1–C4.
- Halls A1 to A3 devote themselves to the construction of waste water treatment plants. In addition, this area is expanded by hydraulic engineering and borehole construction (continues in hall B2). With this extension, the topic of supply and water treatment becomes even more important for IFAT.
- Mechanical engineering and engineering activities in water management with pump segment are located in hall B1, process measuring and control technology in hall C1 and fittings in hall C2. The area is supplemented by water supply and sewage systems in halls B2 and B3, as well as in halls C3 and C4.
